

Done. Both edits in.

TCPA IQ — Case Value Scoring Engine (v1)

Computation order

1. **Auto-decline check first.** If any kill condition is true, output **DECLINE** and stop.
2. **Additive score.** Sum the six factors → raw score out of 100.
3. **Apply cap** (only one left). Final = the *lower* of raw score and the shell cap if triggered.
4. **Map to band.** Output score, band, breakdown, and flagged unknowns.

Note: there's no "can't ID" gate. If no defendant can be found, the skill never reaches scoring — it exits earlier with **NO DEFENDANT IDENTIFIED**. Scoring only runs once there's an entity to score.

Auto-decline (kill conditions — checked before scoring)

- Job / employment scam
- True healthcare services (*device **marketing** is NOT healthcare — stays viable*)

The six factors

1. Claim Type — 24 max

Highest theory present	Base
Tier 1 — Prerecorded/artificial voice · Internal DNC (64.1200(d))	18

Tier 2 — Florida DNC / FTSA	13
Tier 3 — Quiet hours	9
Tier 4 — National DNC registry	7

Stacking add-on: **+3** for a second distinct theory, **+6** for three or more.
Caps at 24.

2. Collectability — 24 max

Profile	Base
50+ employees 💰	18
11–50 employees ✓	13
<10 employees ⚠️ (real/collectable)	6

Add-on: **+6** for verified \$10M+ revenue *or* confirmed public company.
Caps at 24.

3. Willfulness / Treble — 18 max *(highest single value applies, not additive)*

Fact pattern	Points
Known repeat offender — prior TCPA settlement/judgment, did it again	18
Kept contacting after a visible "STOP"	12

Contact to a National DNC–registered number	6
None visible	0

4. Violation Volume — 16 max

Contacts in record	Poin ts
10+	16
5–9	11
3–4	7
1–2	3

5. Identifiability / Forum — 10 max

Situation	Poin ts
Entity identified + suable in client's forum (FL nexus, or registered/serviceable in FL)	10
Entity identified, out-of-state but reachable (foreign registration / known HQ)	6
Identified but forum friction (generic registered agent only, no FL nexus, minimal footprint)	3

(No "cannot ID" row — that path exits before scoring.)

6. Defensibility (consent/revocation) — 8 max

Posture	Points
Clean cold contact, no plausible consent	8
Ambiguous — some prior contact, consent unclear	4
Evidence of prior consent / established business relationship	0

Cap (applied after the additive score)

- **Uncollectable shell — convergent profile only: 1–2 employees AND no SoS registration AND sub-\$1M → cap final at 50.** All three must be true. One alone just scores low in Collectability; it doesn't cap.

That's the only cap. A perfect claim against a shell still lands in **Marginal** territory — low enough to flag as not-a-standard-pursuit, high enough that it never auto-rejects, because those are the cases you route to monetization rather than throw away.

Bands

- **80–100** Priority — pursue now (whale individual or class candidate)
- **60–79** Solid — standard intake
- **40–59** Marginal — only if cheap to develop, a volume play, or a monetization candidate
- **<40** Pass

Output per investigation

None

TCPA IQ SCORECARD – [Defendant name]

SCORE: 73 / 100 → BAND: Solid (standard intake)

SCORED FROM EVIDENCE

Claim Type 18/24 Tier 1
prerecorded + Tier 4 DNC (×2 stack +3)

Collectability 19/24 ~120 employees,
\$10M+ verified (+6)

Willfulness 12/18 STOP ignored
(visible in screenshots)

Volume 7/16 4 contacts in
record

Identifiability 10/10 FL entity,
Active SoS

Defensibility 7/8 cold contact, no
apparent relationship

CAP CHECK: not a shell – no cap applied

KILL CHECKS: passed

⚠ NEEDS INTAKE TO CONFIRM (could move the score)

- Full volume – client may have more contacts than screenshots show (↑ Volume)
- Consent history – confirm no prior business relationship (↓ Defensibility if found)
- Repeat-offender status – litigation history not yet run (↑ Willfulness to 18 if hit)

When the shell cap *does* fire, that line reads instead:

None

CAP CHECK: ⚠ SHELL CAP – 1–2 employees, no SoS, sub-\$1M → capped at 50
(raw score was 88; monetization candidate, not standard pursuit)

Still flagging the one open design choice from last round, untouched by these edits: **National DNC double-counts** as both a claim theory (Tier 4) and a willfulness aggravator (the 6-pointer). Intentional for a stacked case, but for a *pure* Tier-4-only case you may not want to also hand it the willfulness 6, since there the DNC contact *is* the claim rather than an aggravator. Your call — want it left as-is, or suppressed when Tier 4 is the only theory?
